

Damn Parking - Sprint 1 Contributions & AI

Team: Joe Mota, Saul Burns, David Vasquez, Kevin Llamas

Sprint: 1 | Purpose: Contribution statement and AI disclosure

Contribution statement

Joe Mota - Focus: Portal / Product

Saul Burns - Focus: Engineering

David Vasquez - Focus: Software Engineering

Kevin Llamas - Focus: Software Engineering

AI use disclosure

Cursor / generative AI assisted portal construction (layout, Three.js lot visualization, page scaffolding) and produced initial drafts of Sprint 1 PM artifacts for team review.

What the team changed or rejected:

- Rejected framing Damn Parking as a payment/reservation marketplace (kept occupancy intelligence).
- Rewrote market top pick to emphasize camera reuse and dual driver/ops value; cut generic smart-city filler.
- Tightened charter out-of-scope (no enforcement LPR, no production camera access without approval).
- Go/no-go style justifications for later sprints remain human-owned; individual memos/reflections are never AI-authored.
